

Introducing a Library technician

Sandy Culley is a library technician with staff library services in the clinical practice and education department at Hamilton Health Sciences (HHS). She has been with HHS for 22 years and is based at Juravinski Hospital and Cancer Centre.

What do you do?

I provide access to high-quality information to our staff, doctors and learners in support of best practices for [patient care](#), education and research.

I help people focus on what's most relevant to them. Then, I help them use the appropriate resources to retrieve that information. Our team provides database search instruction, document retrieval and runs mediated literature searches. We ensure our [electronic resources](#) are easily accessible and manage HHS' library collection.

What do you love most about your job?

I love the multifaceted and collaborative nature of my job. Though my library colleagues and I are not on the front lines, we work behind the scenes to support the different health care teams across HHS.

We make it easier to get quality health information and move evidence-based practice forward.

From locating journal articles for patient care, to running a comprehensive literature search for a [quality improvement project](#)

The library services team advises on the most appropriate resources or methods. A point-of-care tool, like [DynaMed Plus](#), provides synthesized, evidence-based information and sends
